

LIGHT GIVING TINY THINGS TO REVEAL AND SHOW IMPORTANT AIR INSIDE BLOOD THROUGH BODY PARTS

January 2022. Meeting of tiny things information learning people in business city with big clock and wheel eye.

WHY DO THIS?

WE NEED TO CHECK THAT THE IMPORTANT AIR WE BREATHE IS INSIDE THE BLOOD FLOWING AROUND BODY PARTS BECAUSE WE GET SICK AND DOCTORS NEED TO UNDERSTAND WHY. BUT BODY PARTS STOP CAMERAS. SO LEARNING INFORMATION PEOPLE HAVE TO CUT BODY PARTS, MAKING ANIMALS DIE AND PEOPLE CRY. THIS IS SAD AND BAD.

We want to do better: less money, less terrible, and nicer.

HOW TO SEE THROUGH BODY PARTS?

BODY PARTS STOPS BLUE AND GREEN LIGHT, SO WE NEED TO USE RED AND INVISIBLE LIGHT WHICH GO THROUGH MORE THAN A FINGER OF BODY PARTS. THIS IS A LOT OF GO-THROUGH TO GET SICKNESS INFORMATION IN SMALL ANIMALS.

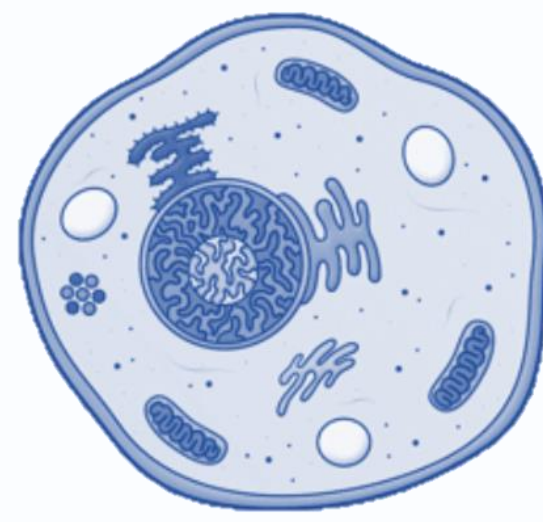

Light that doctors use to see through you goes too far.

WHY USE TINY THINGS?

TINY THINGS CAN GO INSIDE THE SMALL BAGS OF WATER THAT MAKE UP EVERYTHING THAT IS ALIVE.

THINGS THAT TOUCH AND KISS SMALL INSIDE BODY MACHINES CAN BE ADDED TO THE SURFACE OF THE TINY THINGS SO THAT THE TINY THINGS WILL GO INTO INTERESTING BODY PARTS, AND SO THE TINY THINGS DON'T MAKE SMALL BAGS OF WATER SICK.

This means tiny things can be used in inside of many different body parts.

WHO DID THIS?

Dr Lewis E. MacKenzie

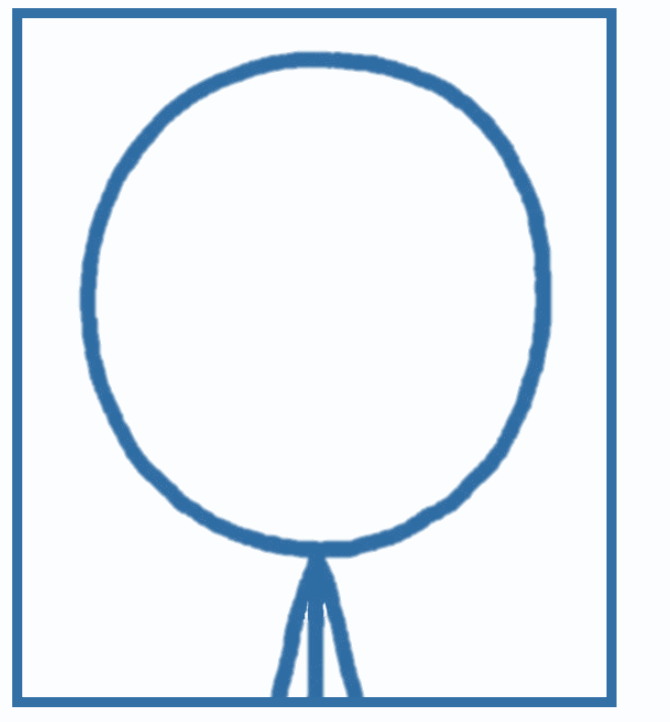

Department of Chemistry

University of Strathclyde

PEOPLE WHO HELPED

Many nice people have helped and all their names will not fit here. The style idea is from XKCD "Thing Explainer".

LEARNING OFFICES THAT GAVE WORK GO MONEY

- BBSRC (Discovery Fellowship)
- Strathclyde Chancellor's Fellowship

HOW IS IT GOING?

*** WE MADE BIT THAT GIVES OUT RED LIGHT MUCH EASIER TO MAKE!**

Less money, save time. Safer, make more. Read about it on computer page soon!

*** WE HAVE MADE THE THIN JACKET OF GLASS WITH POCKETS!**

Pockets are good size, but jacket can be better.

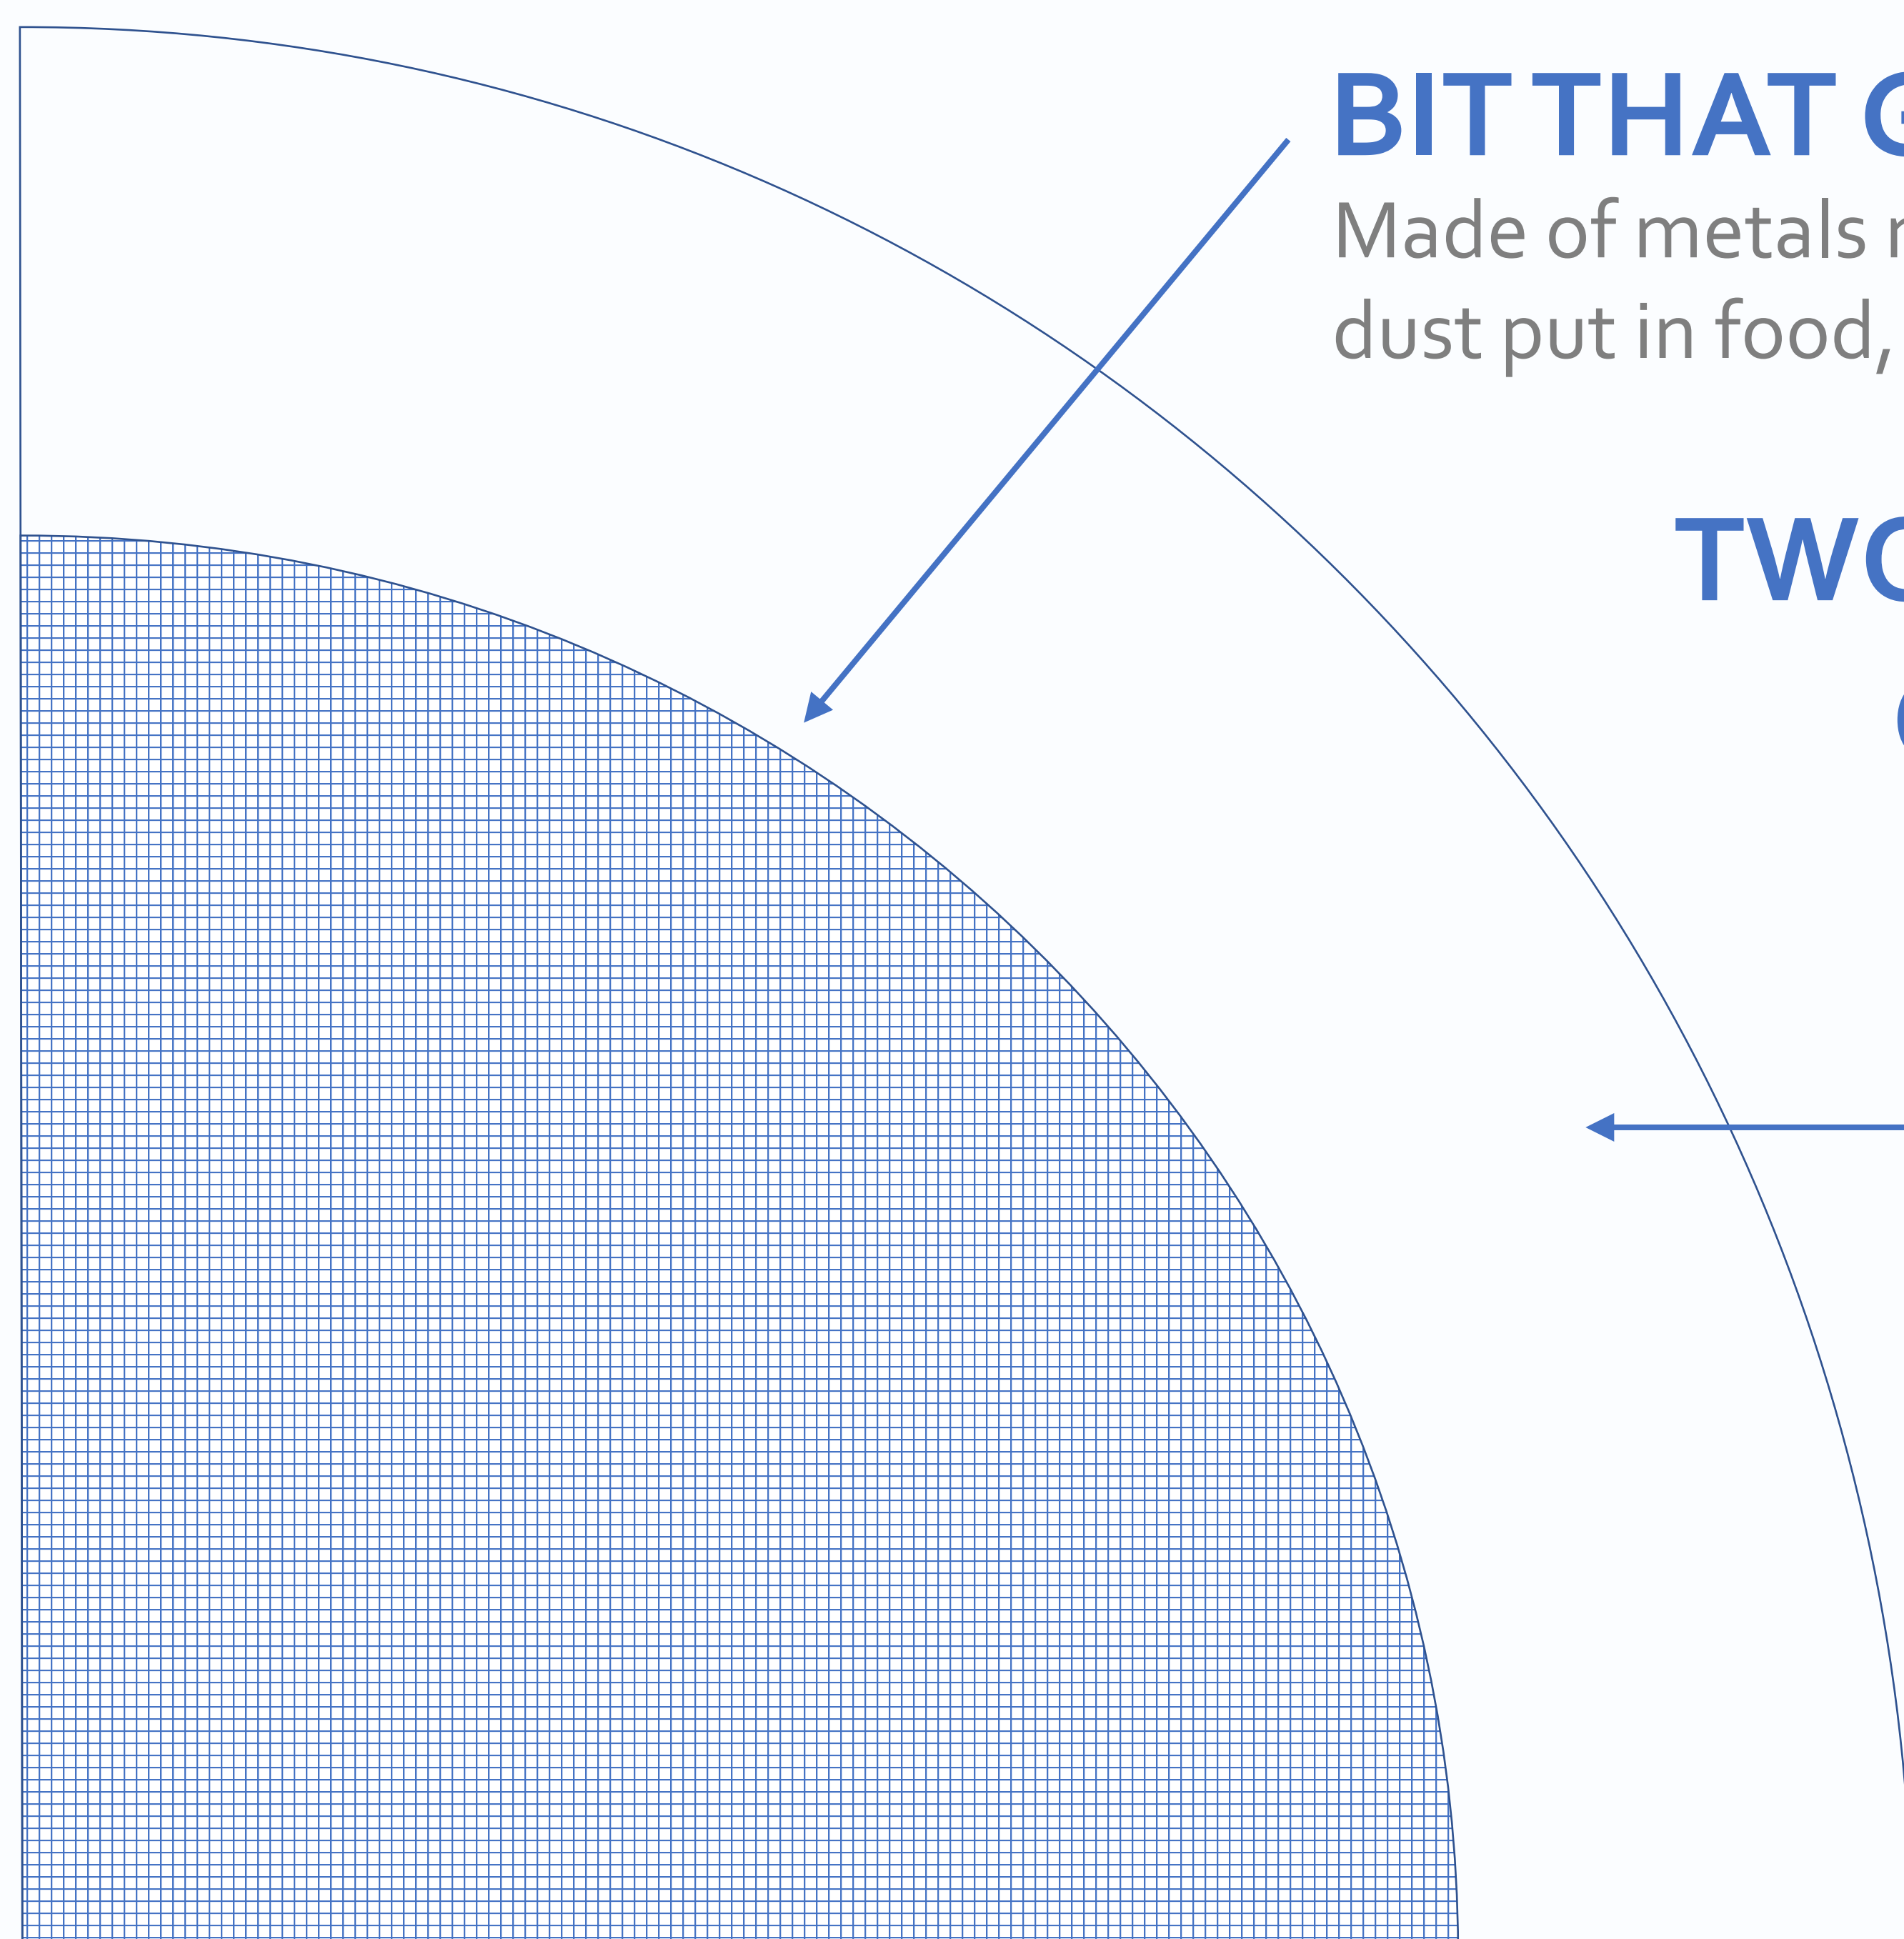

*** WE WILL ADD MORE THINGS TO THE TINY THING TO MAKE IT WORK GOOD!**

SIZE: MUCH SMALLER THAN HAIR

Too small to see with light eye. Need power ball eye.

LINE PICTURE OF TINY THING

BIT THAT GIVES OUT RED LIGHT.

Made of metals named after tiny towns and places, half of the white table dust put in food, and stuff to help keep bones in mouth hard.

TWO BITS OF HOT INVISIBLE LIGHT GO IN ONE BIT OF RED LIGHT COMES OUT!

This is called light up-going!

THIN JACKET OF GLASS WITH POCKETS TO HOLD THE THINGS THAT NOTICE THE IMPORTANT AIR AND WHICH MAKE RED LIGHT GO AWAY IF IMPORTANT AIR IS NOT THERE. Hello darkness my old friend...
