ABSTRACT

This article will present the findings of a Carnegie funded project which looks at the application of European Union ('EU') law before the Scottish courts from UK accession in 1973. European law produces rights and obligations which must be given effect by national courts. Over the last 40 years the EU has been given competence in ever broader areas of substantive law which have changed the legal landscape across increasing areas of personal, social, business and economic life. Accordingly, the Scottish courts are required to apply EU rules to a broad range of legal disputes. This is the first comprehensive study of the application of EU law by the Scottish courts. It is important to consider the extent to which EU law is considered and applied in order to assess its impact on the Scottish legal order.

This research project was triggered by the Scotch Whisky Association minimum alcohol unit pricing case. This case and the constitutional inter-relationship between EU law and Scots law that is at its core, leads to a wider inquiry about the role played by EU law in many disputes before the Scottish courts. The hypothesis is that there have been an increasing number of judgments in recent years applying EU law, demonstrating the increasing substantive reach and enhanced awareness of EU law. The article will assess different trends in the EU case-law before the Scottish courts to the end of 2015. This research is

1 Thanks to Liam Maclean, Solicitor at Shepherd and Wedderburn LLP, Edinburgh, for invaluable research assistance and to the Carnegie Trust for the Universities of Scotland for funding this project.
2 See http://www.eulawscot.co.uk/.
5 Scotch Whisky Association v Lord Advocate, see details of Court of Justice of the European Union (‘CJEU’) preliminary ruling infra.
6 An initial objective of the project had been to map the picture of EU law before the Scottish courts to different phases in the development of the EU and EU law. However, it is difficult to map case-law directly to specific dates or distinct processes in the development of the EU, such as the dates of enlargement or Treaty reform. Other options considered were in relation to the adoption of important EU legal principles but these tend to be fluid and developed over periods as are specific landmarks in the judicial protection of EU rights. See eg Dougan, M ‘The Vicissitudes of Life at the Coalface: remedies and Procedures for Enforcing EU law before the National courts’ pp407-438 in Craig, P and De Burca G The Evolution of EU Law, 2011: OUP, where he refers to 3 distinct periods in the jurisprudence of the ECJ:-1) Early period till mid 1980s- where domestic standards of judicial protection remained the rule 2) Mid period until 1993- where there was a renewed conception and application of the principle of effectiveness; and the 3)Later period since 1993- ‘the Court’s hasty retreat’.

See further infra regarding how the case-law was examined over different periods, with the underlying assumption that case-law would increase and we could also potentially observe other case-law trends over those periods, albeit we could not match those directly to specific legislative or
particularly prescient and important in the light of the recent Brexit outcome in the EU referendum, and should allow us to reflect on the significant impact Brexit is likely to have on the legal landscape in Scotland (and the UK more generally) and the potential difficulties in neatly unpicking 40 years of assimilation of EU law and principles into Scots law. These research outcomes should lead to further reflection and debate on the role of EU law and its impact on judicial decision-making and the Scottish legal system in general.

INTRODUCTION

The UK joined the EU in 1973 and UK legislation established that EU law had to be given effect in the UK. Over the last 40 years it is generally accepted that the UK’s membership of the EU has produced a considerable impact on the legal systems within the UK. The central EU judicial body, the Court of Justice of the European Union (‘CJEU’), emphasised in a series of rulings that EU law could produce rights and obligations between individuals that national courts were required to enforce in any legal dispute raised before them. Combined with the expanding substantive scope of EU law to cover vast areas of personal and business relationships between parties based in the EU (and in some cases beyond), there is evidence that EU law has had a significant impact in the way that national courts across the EU have had to exercise their judicial roles. EU law has had to be accommodated by all legal systems in ways that has inevitably impacted on many aspects of personal and business life. As far back as 1995 and in the wake of the ground-breaking rulings by the CJEU in Francovich and Factortame, there was recognition of the increasing significance of national courts as ‘actors in the process of ensuring the faithful implementation of Community law’.

However, there has never been a comprehensive study in Scotland considering the impact of EU law on Scots law and decision-making by the judiciary in the Scottish legal system. This study seeks to provide a comprehensive database of all judgments by Scottish courts in which EU law has been considered and applied since the UK’s EU membership and may lead to further work on the qualitative impact of EU law on the Scottish legal system.

---

7 The European Communities Act 1972.
10 The impact of which in relation to the enforcement of EC law by the English courts was noted as ‘considerable’ by Maher, I ‘A Question of Conflict: the Higher English Courts and the implementation of European Community law’ Ch 11 p321 in Daintith, T(ed) Implementing EC Law in the United Kingdom: Structures for Indirect Rule, 1995: John Wiley & sons Inc, Chichester.
12 See the very limited discussion in Shaw, J ‘Scotland: 40 years of EU Membership’ (2012) Journal of Contemporary European Research Volume 8 Issue 4 547-554
European Union law consists primarily of the EU Treaties, together with Regulations and Directives (all as interpreted in light of the jurisprudence of the CJEU). Over the last 40 years the European Union has been given competence and adopted legal rules in broader areas of substantive law which have changed the legal landscape of rights and obligations across increasingly greater areas of personal, social, business and economic life. Accordingly EU law is part of the Scottish legal system and the Scottish courts are required to apply EU rules, either directly (Treaty or Regulation) or indirectly (where provisions of a Directive have been implemented by primary or secondary legislation) to an increasingly broad range of legal disputes.

This research project was triggered by the consideration of EU law in the recent Scotch Whisky Association minimum alcohol pricing case, where the dispute was referred by the Inner House of the Court of Session in Scotland to the CJEU for a preliminary ruling during 2014. This case and the constitutional inter-relationship between EU law and Scots law that is at its core, leads to a wider inquiry about the role (the hypothesis will be that it has increased in recent years) played by EU law in many disputes before the Scottish courts. The central research question is to assess the extent to which EU law has influenced judicial decision-making in the Scottish civil courts in the last 40 years. The hypothesis is that there will have been an increasing number of judgments by Scottish courts in more recent years applying EU law demonstrating the increasing substantive reach of EU law and enhanced awareness of EU rights. Accordingly the hypothesis is that EU law will have pervaded many elements of private and public law disputes in the Scottish courts. A subsidiary question will be to assess how the picture of EU law before the Scottish courts maps to different periods.

This research is particularly prescient and important in the light of the recent Brexit outcome in the EU referendum, and should allow us to reflect on the significant impact Brexit is likely to have on the legal landscape in Scotland (and the UK more generally) and the potential difficulties in neatly unpicking 40 years of assimilation of EU law and principles into Scots law.

---

13 There are, of course other sources of EU law e.g. the Decisions of the various EU institutions, guidance / guidelines issued by the Commission or another EU executive body, but it is far less likely that these will fall to be interpreted by national courts.

14 23 December 2015, Case C-333-14, Scotch Whisky Association and others v Lord Advocate, [2016] 2 CMLR 27. See the subsequent ruling by the Inner House in the case at [2016] CSIH 77, 2016 S.L.T. 1141.

15 For an early outline discussion of this issue, see C Boch and R Lane ‘European Community Law au Pays du tartan’ in MacQueen, H (ed), Scots Law into the 21st Century: Essays in Honour of WA Wilson, 1996: W. Green.

16 See discussion further infra.
METHODOLOGY AND LIMITATION OF CASES COVERED

The primary research methodology involved a research assistant locating all published case-law by the Scottish courts since 1973. The initial search was undertaken using Westlaw. The full list of Westlaw judgments from each of the Scottish courts under review for the period between 1973 and 2015 was recovered. Each case was then briefly reviewed to ascertain whether, on the face of it, it referred to EU law. This general check of all Scottish judgments published on Westlaw was complemented by searching the Scottish cases published on Westlaw against a variety of generic EU law search terms, and the results were also cross-checked against a number of other search engines. There is some difficulty in clearly delimiting the appropriate cases to be covered because it is evident that some EU law cases fail on a procedural issue or because of some other technical or legal hurdle and not simply because they have failed to establish the substantive EU law claim or defence to the requisite standard. However, the research extends to all cases in which EU law aspect formed a part of the case or was relied on by either party or in the judgment, even where EU law was not a factor in the determination of the particular issue between the parties in dispute, for instance where the judgment resolved around a procedural issue and irrespective of the stage of the litigation process at which it was resolved.

RESULTS AND ANALYSIS

A database of all potential EU law cases in the various Scottish courts was produced by the research assistant. These were reviewed and analysed quantitatively by the author using SPSS. At that stage a number of cases were excluded, as discussed below. The final count of judgments to the end of 2015 in all Scottish courts (including the House of Lords/Supreme Court sitting in Scottish cases) was 534 cases. This figure includes some legal disputes where there have been multiple judgments as a result of:- appeals where there have been judgments

---

17 There were minor feasibility issues: the first is that not all judgments of the courts are published, although it is unlikely that any case involving the application of EU law would not comprise either a significant point of law or particular public interest; the second is that not all legal disputes involving EU are litigated to the point of a court judgment but we have to simply accept that the research cannot cover cases which are settled or involve mediation or other forms of alternative dispute resolution which are not in the public domain; the third is that first instance employment tribunal rulings are not routinely published and this potential source of EU law application can not be included, although of course appeals to the Employment Appeal Tribunal (‘EAT’) and beyond will fall within the scope of the study.
19 Including the Land Court’s website, the EAT website.
20 The database catalogues all cases in year order, in relation to the Sheriff Court, Court of Session and Supreme Court under name; citation; area of law; EU rule involved and a brief summary of the outcome together with a copy of the judgment. The same information as collated for cases before the Lands Court and EAT and for cases in which the CJEU has provided preliminary rulings to the Scottish courts.
21 SPSS 22. SPSS is the acronym for Statistical Package for the Social Science, a statistical tool which helps to analyse data.
at different court levels and each has been included; or disputes where there have been multiple judgments in relation to distinct aspects of the dispute: procedural or substantive. This is an attempt to provide a comprehensive study but it may be either over-inclusive or under-inclusive to some extent.\(^{22}\) The data on the 534 EU law judgments selected was input and analysed using the statistical programme, SPSS for Windows.\(^{23}\) Frequency analysis was carried out on the EU case-law sample,\(^{24}\) in some cases represented graphically, and crosstabulations were made between certain responses.\(^{25}\) This has allowed us to provide detailed information about a number of aspects of the EU case-law before the Scottish courts which will be considered in this article:-

- Frequency of case-law before different courts;
- Frequency of case-law in different years;
- Frequency of case-law in successive periods;
- Frequency of cases involving different subject-matter;
- Frequency of cases involving the judicial review procedure;
- Frequency of cases where EU law was raised as a claim or defence;
- Frequency of ‘Success’ in EU Law cases;
- Frequency of cases where EU law was determinative;
- Frequency of cases involving the ‘Spillover’ application of EU law;
- Frequency of cases involving private law relationships
- Frequency of cases involving different EU law impact on private parties; and
- Frequency of cases involving different types of EU law rules.

### Reasons for exclusion of cases

The focus in this research is on EU law in the civil courts and the impact of EU law on the administration of civil justice, and rights and obligations. Accordingly a number of cases involving the application of EU law in the criminal courts, primarily as a defence,\(^{26}\) have been excluded, as has all case-law involving the application of the rules on European Arrest

\(^{22}\) Accordingly, when we discuss ‘case-law’ we mean judgments in cases where EU law was considered and/or applied.

\(^{23}\) SPSS Statistics 22.

\(^{24}\) It should be stressed that the term ‘frequency’ here relates to the case-law within the EU law sample and not to levels of litigation before the Scottish courts generally.

\(^{26}\) See for example Hunter v The Caledonian Cheese Company Limited Stranraer Sheriff Court 19 July 2011, in relation to the Urban Wastewater Treatment (Scotland) Regulations 1994 and The Shellfish Waters Directive 79/923/EEC.
In addition, a number of cases were excluded where they related only to the ECHR or where EU law was mentioned but was completely irrelevant to the case.

The Impact of EU law: The Factual and Social Context of the EU Case-law

‘As Lord Mackenzie Stuart observed, Community law has a habit of emerging in unlikely corners’. Indeed, the EU case-law gathered over the last 40 years demonstrates the range of private and public law contexts in which EU law has been considered and had a potential impact, as exemplified by the following cases, in chronological (year) order:

Fishing and fishing quotas, see for instance *Gibson v Lord Advocate* (first case in 1975), *Watt v Secretary of State for Scotland*; consideration of whether an interdict to restrain a party from passing off its products as those of another whisky company contravened the EU

---

28 See, for example the early 1975 case of *Holiday Flat Co. v Kuczera and Anr*, (1978) S.L.T. (Sh. Ct.) 47, where the Sheriff made a reference to "board" under the Rent (Scotland) Act 1971 as including a continental breakfast! Subsequently, *Gavin v Lindsay* 1987 S.L.T. (Sh. Ct.) 12, was initially included, and ultimately excluded, where Sh Kearney’s judgment included the following passage: ‘Counsel then referred to Holiday Flat Co. v. Kuczera including Sheriff Macvicar’s observation as follows: “I doubt whether a promise to provide board can be satisfied by less than the supply of at least one meal a day, and it may be that, in a more robust age, the law would have demanded that the meal should include at least a boiled egg, But it would probably be pedantic (particularly since the British entry into the European Economic Community) to deny the continental breakfast the status of a meal sufficient to constitute board. Accordingly, I hold that by supplying a breakfast consisting of tea or coffee, toast, butter and marmalade, the landlord was providing board.”’
Further examples of cases excluded from the final sample include:-- *Armour v Thyssen Edelstahlwerke A.G.*, 1986 S.L.T. 452, where there was mere reference to contractual conditions which had been notified to the High Authority (Commission) of the European Coal and Steel Community and had been published in terms of the provisions of Art. 60 of the European Coal and Steel Community Treaty; *Whaley v Lord Watson of Invergowrie*, 2000 S.C. 125, a judicial review petition regarding the Hunting Dogs Bill, where in the Inner House, LP Rodger stated at p481 ‘It is unnecessary for present purposes to consider the position where Community law rights are involved’; *Napier v Scottish Ministers, concerning* the treatment of prisoners, which only related to Art 6 ECHR; *Groenius BV v Smith*, which included a tangential reference to the Code of Conduct for Lawyers in the European Community adopted by the Bars and Law Societies of the European Community on 28 October 1988; *Macdonald Estates Plc v Regenesis (2005) Dunfermline Ltd*, [2007] CSOH 123; 2007 S.L.T. 791, involving a background passing reference to the Unfair Terms in Consumer Contracts Regulations 1994 in a contractual dispute between property developer and professional consultant; and the Inner House and Supreme Court judgments in 2012 in *Imperial Tobacco Ltd, Petitioner*, [2012] CSIH 9; 2012 S.C. 297; 2012 S.L.T. 749, and 2013 S.C. (U.K.S.C.) 153 2013 S.L.T. 2 respectively, where there was no mention of EU law, unlike the earlier Outer House judgment.
29 Per Boch and Lane supra referring to *The European Communities and the Rule of Law*, 29th Hamlyn Lectures (1977) p1.
bar on restrictions to cross border trade; William Grant & Sons Ltd v Glen Catrine Bonded Warehouse Ltd (No.3); sexual discrimination on the basis of sexual orientation (homosexuality) in the Armed Forces, Advocate General for Scotland v MacDonald; a claim for contracting MRSA in hospital, Miller v Greater Glasgow Health Board; offshore workers and the application of the EU working time rules, Russell v Transocean International Resources Ltd; classroom assistants’ equal pay claims, North v Dumfries and Galloway Council; NHS tendering decisions, and public procurement challenges, Elekta Ltd v Common Services Agency; Trade mark claims by a footwear retailer, Schuh Ltd v Shhh... Ltd; Hunterston Power station and EU environmental law, McGinty v Scottish Ministers; beer, in the context of a health and safety delict claim by a worker at Tennent’s, O’Neil v DHL Services Ltd; bus services to and from Glasgow airport, Arriva Scotland West Ltd v Glasgow Airport Ltd; a challenge to a Scottish Parliament Act banning tobacco vending machines on EU trade law grounds, Sinclair Collis Ltd v Lord Advocate; fruit and vegetable producers’ entitlements to CAP payments, Angus Growers Ltd v Scottish Ministers; numerous asylum related claims, for instance MN (South Africa) v Secretary of State for the Home Department; Scottish winter weather and a health and safety claim by a worker for a fall on an icy path, Kennedy v Cordia (Services) LLP; the application of taxi licensing rules in Spring Radio Cars Ltd v Glasgow City Council; wind farms and EU environmental law, Sustainable Shetland v Scottish Ministers; football TV broadcast licensing rights, Scottish Professional Football League Ltd v Lisini Pub Management Co Ltd; alcohol and the challenge to the Alcohol

**COURT**

The case-law database includes any judgment by a Scottish civil court including the Supreme Court in Scottish appeals.\(^{59}\) Judgments were coded according to whether they emanated from the Sheriff Court (Sheriff or Sheriff Principal on appeal),\(^{60}\) Court of Session Outer House,\(^{61}\) Inner House\(^{62}\) and the Supreme Court (in Scottish cases), in addition to EU case-law before the Lands Court\(^{63}\) and EAT sitting in Scotland.\(^{64}\)

The crosstabulation between different periods and courts demonstrates that although there is an increase in case-law across all courts in each period, and particularly in the last 2 periods 2004-2015 we see a notable increase in cases before the Supreme Court and the two specialist courts- the EAT and Lands Court in these latter periods, with all 13 Supreme Court cases between 2004 and 2015.65

**Preliminary rulings by the Court of Justice (‘CJEU’)**

We have also located 12 CJEU rulings in Scottish preliminary references. It should be stressed that courts in the UK have made 589 references in total to the end of 2015, and in the same period the Irish courts have made a total of 85 references, and in the relatively short period since accession the Slovenian courts have already made 14 references.66 Further study will be required to seek to understand the paucity of references by the Scottish courts.67 However, in terms of the scope of this study, it is interesting to note that 4

---

65 Further research will be required to relate this to the level of litigation generally in the Scottish courts in that period.

of the rulings have involved consideration of the application of EU law in a criminal context\(^{68}\) in references by the High Court of Justiciary, in the following CJEU rulings: 14 February 1984, *Mehlich and Gewiese v Mackenzie*;\(^{69}\) 21 May 1987, *Hamilton v Whitelock*;\(^{70}\) 13 November 1990, *PF Stranraer v Marshall*;\(^{71}\) and 7 May 1992, *PF Elgin v Wood and Cowie*.\(^{72}\)

Three of these related to breach of fisheries Regulations while *Hamilton v Whitelock* concerned breach of rules on the use of tacographs. Accordingly there have only been 8 rulings in references by Scottish civil courts, including a cluster of 3 VAT cases in 2008-2010, as follows:-

21 June 1988, *Brown v Secretary of State for Scotland*,\(^{73}\) a reference from the Court of Session (OH) in a dispute involving judicial review of a decision concerning a University student allowance and involving the interpretation of Art 7 of the EEC Treaty and Regulation 1612/88;

30 June 1988, *Brown v Rentokil Ltd*,\(^{74}\) a reference from the House of Lords in a dispute involving equal treatment in the pregnancy-related dismissal of a woman and involving the interpretation of Directive 76/2007;

10 July 2003, *Booker Aquaculture Ltd v the Scottish Ministers*,\(^{75}\) a reference from the Court of Session in a dispute involving judicial review of decisions concerning the destruction of fish stock and involving the interpretation of Article 6(2) EU and Directive 93/53;

18 December 2008, *Royal Bank of Scotland Group plc v The Commissioners for HMRC*,\(^{76}\) a reference from the Court of Session in a dispute concerning value added tax and involving the interpretation of Directive 77/388/EEC;

16 December 2010, *MacDonald Resorts Ltd v The Commissioners for HMRC*,\(^{77}\) a reference from the Court of Session in a dispute concerning value added tax and involving the interpretation of Directive 77/388/EEC;

22 December 2010, *The Commissioners for HMRC v RBS Deutschland Holdings GmbH*,\(^{78}\) a reference from the Court of Session in a dispute concerning value added tax and involving the interpretation of Directive 77/388/EEC;

6 November 2014, *Feakins v The Scottish Ministers*,\(^{79}\) a reference from the Lands Court in a dispute concerning payment entitlements under the Common Agricultural Policy and involving the interpretation of Regulation 795/2004;

23 December 2015, *Scotch Whisky Association and others v Lord Advocate*,\(^{80}\) a reference from the Court of Session (Inner House) in a dispute concerning the minimum pricing of alcohol and involving the interpretation primarily of Articles 34 and 36 TFEU.

\(^{68}\) This is of course in itself interesting and demonstrates the scope of application and significance of EU law but not in relation to the determination of public and private law rights and obligations.

\(^{69}\) [1984] SLT 449.

YEAR

Chart 2 simply demonstrates the number of EU law cases each year since EU membership with the first reported judgment in 1975, until 2015.\textsuperscript{81} The Chart highlights, as anticipated, a general upward trend over the 40 years, although the slight downturn in 2014 and 2015 is noticeable, and further research will be required in order to understand why there has been less EU law litigation in this most recent period.\textsuperscript{82}

\textbf{CHART 2- YEAR}

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{chart2}
\caption{YEAR}
\end{figure}

\section*{PERIOD}

\textsuperscript{80} Case C-333/14 [2016] 2 CMLR 27.
\textsuperscript{81} Further research will be required to relate this to the level of litigation generally in the Scottish courts in that period.
\textsuperscript{82} It should be noted that there has been a considerable decrease overall in the number of civil cases disposed of in the Scottish courts between 2009-10 and 2014-15, see p54 of Scottish Government, Civil Justice Statistics in Scotland 2014-15, available at http://www.gov.scot/Resource/0049/00497242.pdf.; See also http://www.gov.scot/Topics/Statistics/Browse/Crime-Justice/TrendCivil
The seminal work on the role of the CJEU (at that stage known as the European Court of Justice, ‘ECJ’) in EU preliminary rulings by Stone Sweet and Brunell constructed a data set in relation to preliminary references,\(^{83}\) utilising the following periods: 1958-1973; 1974-1979; 1980-1985; 1986-1991; 1992-1997.\(^{84}\) The current study of Scottish EU case-law adopts those periods and adds the periods 1998-2003, 2004-2009 and 2010-2015.\(^{85}\) What Table 3 and Chart 3 clearly demonstrate, despite the downturn in 2014 and 2015, is a clear general upward trajectory in the frequency of case-law in the Scottish courts involving the consideration and application of EU law. It should be noted that 69.5% of the total Scottish courts’ EU case-law since 1973 has been in the period since 2004, with 42.5% of the total figure in the period since 2010 alone. The proceeding sections should help us, at least in a quantitative way, to drill down into that broad picture in a little more detail.

\(^{85}\) See discussion at fn 6 supra.
We also coded the case-law on the basis of the subject-matter of the case. Again it should be stressed that we excluded from the scope of the research judgments involving EU law application in a criminal context as discussed above at ‘Reasons for exclusion of cases’. Some of the coding of cases was difficult/problematic, with potential overlap in particular between planning/environmental and discrimination/employment law. There were very few data protection cases, and these were coded together with IP cases generally.

86 In both instances the tendency was to code as the latter, ie environmental law (which tended to be the substantive the EU law under consideration in a planning application context) and employment law (which includes many issues including discrimination law. Accordingly ‘discrimination’ really only covered case-law outside the employment context.
Interestingly, the two most frequent areas of EU case-law primarily involve private law disputes: delict (including health and safety) with 93 cases (17.4% of the total) and employment law with 90 cases (17% of the total). The third most frequent subject matter also reflects the impact of EU law on private law disputes in the Scottish courts, with 58 cases (10.9% of the total) concerning the civil and commercial rules of international private law. Nonetheless, the next two most frequent case-law categories are firmly set in a public law context – immigration and asylum law with 42 cases (7.9% of the total) and environmental law with 40 cases (7.5% of the total).

---

87 The latter may partly be explained by the number of EAT rulings, and also subsequent appeals to the Court of Session and Supreme Court.

88 Primarily the rules on civil and commercial jurisdiction (the Brussels Convention and its successor Regulations- Regulation 44/2001 and Regulation 1215/2012) and the rules on choice of law in contract, the Rome Convention and its successor the Rome I Regulation.
We undertook a crosstabulation between the reference periods and the subject matter in order to seek to identify any particular trends or case-law clusters. The notable points here, for further consideration and discussion with subject-matter specialists are as follows:- 12 of the 18 IP cases were decided in the period 1998-2003; we can witness a considerable increase in the delict and employment law case law since 1998 (post Maastricht Treaty) with 89 of 93 in total and 62 of 91 in total cases in those two major private law categories respectively, demonstrating, the increasing scope of application of EU law in private law disputes in recent years; there is a cluster of tax cases (10 of the 19 in total) in the period 2004-2009; 26 of the 32 public procurement cases were decided between 2010 and 2015; and since 2010 immigration and asylum law, involving the consideration of EU rules or context, has developed as a major area of work before the Scottish courts, with 34 of the total 42 cases in this most recent period perhaps reflecting global phenomena as much as EU law developments specifically.

JUDICIAL REVIEW

Judicial review proceedings in the Court of Session have been the subject of considerable debate and recent reform, and the increasing significance of judicial review before the Scottish courts has been stressed. Moreover, the influence of European law in developing the Scottish judicial review rules in this context has also been identified. Given the prominence of judicial review as a litigation tool, we considered it important to assess whether and to what extent European Union substantive law has been the subject of consideration and application in petitions for judicial review in the Scottish courts. The data reveals that a significant minority of the Scottish EU law case-law, 111 cases (20.8% of the total) are set in judicial review proceedings.

This clearly demonstrates a trajectory towards more judicial review petitions involving EU law in particular in the most recent period 2010-2015, and judicial review proceedings also constitute a much greater percentage of all case-law involving EU law in that period than in any earlier period. Nonetheless, this also reflects a much broader resort to judicial review in Scotland in recent years, and indeed the EU component of the overall judicial review case-load of the Court of Session is relatively miniscule given the average of 303 judicial review cases per year in the court over the years 2008-2014.

CLAIM OR DEFENCE

We also coded cases on the basis of whether EU law was raised by the claimant or defence particularly given the perceived importance of the use of EU competition law as a defence to contractual claims but in the overall context of the research very little turns on this issue and indeed as anticipated, 89.9% of the Scottish EU case-law involves EU law being raised by the pursuer.

SUCCESS

We coded the cases as ‘successful’, ‘partially successful’, ‘Unsuccessful’ and ‘N/A’. We will not focus on this aspect of the research as the classification of cases under these

---

92 See Edwards supra.
93 See ibid A Page, ‘The judicial review caseload: An Anglo-Scottish comparison’ 337-352.
94 See Reed and Page supra.
95 And in some cases this is difficult where EU law merely sets the context rather than being specifically relied upon.
96 See for example O Odudu ‘Competition Law and Contract: The Euro-defence’ Ch 17 in Leczykiewicz, D and Stephen Weatherill, S eds The involvement of EU Law in Private Law Relationships, 2013: OUP.
97 Some success cases were straightforward to code, such as a successful delict claim based fundamentally on an EU Directive, but other less clear-cut examples were also coded as successful, for instance Vergara v Ryanair Ltd, 2014 S.L.T. (Sh Ct) 119, involving consideration of the EU
various categories is both difficult to analyse in the sense that objective ‘success’ is difficult to define in a way that is meaningful across the full data set (and, indeed, is even more difficult to discern from some published cases). Accordingly, it is very difficult to read too much into the data here. The issue is also related to the next variable, regarding the relevance of the EU legal provision to the case. It should also be clear that success does not necessarily entail final success on the substantive merits of the action, but may for instance be at an interim stage of the litigation. Accordingly, it should be recognised that there may be degrees of success in terms of their overall significance to the developing EU law jurisprudence, dependent for instance on the stage of the litigation process and the relationship between substantive and procedural rules, which it is difficult to reflect accurately by stark figures on success. Table 6 suggests that 37.8% of EU law cases were successful or partially successful, in the sense that the court preferred the overall arguments of the party pleading EU law, although these figures should be treated with caution, and may indeed tell us little, unless a detailed analysis of the legal and factual arguments in each case is undertaken.

**TABLE 6- SUCCESS**

compensation regime for a passenger who suffers delays, which was coded as success although the judgment was on a preliminary time bar plea, which was linked to interpretation of the relevant EU provision. See also *WM Fotheringham & Son v British Limousin Cattle Society Ltd*, 2004 S.L.T. 485.

98 The following two examples demonstrate the partially successful category coding:- *Millar & Bryce Ltd v Keeper of the Registers of Scotland*, 1997 S.L.T. 1000, where the court granted an order ad factum praestandum but interim interdict was considered inappropriate in judicial review proceedings; and *McEwan v Lothian Buses PLC*, 2006 S.C.L.R. 592, where there was a successful claim under Regulation 5(1) of the Workplace (Health, Safety and Welfare) Regulations 1992, but the defence plea of contributory negligence was successful.

99 This was a relatively straightforward category, see for example, *Elekta Ltd v Common Services Agency*, [2011] CSOH 107; 2011 S.L.T. 815, where a public procurement challenge to an NHS tendering decision was unsuccessful.

100 This category is the most problematic and in most cases was closely linked to the categorisation of cases in relation to their relevance, particularly where the EU law was relevant/considered. accordingly, for instance, *Mullen v Churchill Insurance co Ltd*, 2012 G.W.D. 8-151, involved background consideration of the European Communities (rights against insurers) Regulations 2002 and accordingly was coded NA re success; and another complicated case for coding was *Application in respect of A and B*, where provision in the Brussels II Bis Regulation was an important context for the dispute, and accordingly it was coded relevant/considered but NA re success.
When we undertook a crosstabulation between success and periods, the success rate was slightly lower in recent years, but the picture and degree of accuracy in portraying success is too complicated and grey to draw any conclusions. Crosstabulation did highlight that cases involving Immigration and asylum law, environmental law and citizenship have relatively low success rates (27/42, 27/40 and 7/8 classified as unsuccessful respectively), particularly compared with delict and employment law (only 36/93 and 36/91 classified as unsuccessful respectively). Accordingly, at least *prima facie*, it appears that there may be a relatively higher success rates in private law disputes, as opposed to public law disputes, involving EU law though we are at least at this stage unaware of the reasons for this. In this context it is also notable, as demonstrated by Table 7, that judicial review proceedings involving EU law tend to be less successful than the success rate generally for EU law cases, although we do not have success rates for judicial review petitions generally with which to compare this data.

**RELEVANCE**
With this variable we sought to ascertain the extent to which EU law was a significant factor in the case and judgment. We coded the cases as ‘determinative/dispositive’; ‘relevant/considered’ and ‘irrelevant’. Again, we will not focus on this aspect of the research as the classification of cases under these various categories is both difficult, problematic and to some extent inconsistent and a matter of judgment while coding and so it is very difficult to read too much into the data here. The ‘determinative/dispositive’ category is intended to denote case law where the EU law rule or provision is a key factor in the judgment, that was central to the resolution of the dispute, and this inevitably encompassed the majority of the case-law judgments. The second category of ‘relevant/considered’ is where the judgment did not depend on an EU law provision, although it formed an important aspect of the context or background in the case. The third category of ‘irrelevant’ connotes cases where EU law as raised but was deemed to be irrelevant or the case did not fall at all within the scope of the provision. There are potential overlaps between the categories and between the irrelevant category here and some of the cases which were excluded as being of marginal EU law relevance.

</tbody>
</table>

101 This category included cases such as *Miller v Sabre Insurance Co Ltd*, [2010] CSOH 139; 2010 G.W.D. 38-774, see above re success, where the relevant EU law provision formed the background framework or context for the specific issue; and also some cases such as *MacEchern v Scottish Ministers*, [2011] CSOH 135; 2011 G.W.D. 28-626, involving consideration of various EU Directives on health and safety at work in respect of a claim by a forestry worker, but the specific outcome was a proof before answer and therefore the case was coded as relevant/considered rather than determinative or dispositive.

102 The irrelevant code was utilised for instance in *Brown v Rentokil Ltd*, 1996 S.C. 415; 1996 S.L.T. 839; [1995] 2 C.M.L.R. 85 where it was held that the Equal Treatment Directive (76/207/EEC) did not apply in the case of an employee whose illness was attributable to pregnancy, ie this situation was outside the scope of the Directive; similarly in *Addison v Denholm Ship Management (UK) Ltd*, [1997] I.C.R. 770, where the Acquired Rights Directive could not extend to the continental shelf which was not within the territorial scope of the Treaty. See also *Muirhead v G*, 2007 Fam. L.R. 160; 2007 G.W.D. 34-571, where the argument that a decision not to award a father contact as being contrary to EC law was deemed to be irrelevant:- ‘possesses no legal merit and is completely misconceived. The basis appeared to be related to the terms of art 18 of the European Community Treaty. Both of the enactments challenged, however, are legislative provisions of the Parliament of the United Kingdom, which we are bound to apply in this court. In any event, we do not consider that either of these provisions has a bearing on any issue properly arising in the present case.’
SPILLOVER

This issue is based on fascinating work by Johnston on ‘Spillovers’ from EU law into national law. Johnston basically distinguishes between direct EU substantive rights which have their own claim to normative force by EU law, and the indirect application of EU law, where EU law has been given a presence within the national legal order without this being required by EU law itself. The latter are termed ‘spillover’ or indirect application of EU law cases. This is indeed potentially more interesting post Brexit, dependent on the outcome of the negotiations to leave the EU, given that we have chosen to adopt certain domestic rules laws modelled on EU law provisions without any EU imperative or required harmonisation.

<table>
<thead>
<tr>
<th>TABLE 8 SPILLOVER APPLICATION OF EU LAW</th>

</thead>
<tbody>
<tr>
<td>Frequency</td>
</tr>
<tr>
<td>Direct application of EU law</td>
</tr>
<tr>
<td>Spillover application of EU law</td>
</tr>
<tr>
<td>Total</td>
</tr>
</tbody>
</table>

The proportion of spillover to direct application cases is relatively small over the full period (only 7.5% of the total case-law) with the exception of 1986-1991 where a slight majority of 8 of the 15 EU law cases in the Scottish courts were ‘spillover’ cases involving a cluster of Brussels Convention, private international law- civil and commercial cases and the application of the rules on civil and commercial jurisdiction in schedule 4 and schedule 8 of the Civil Jurisdiction and Judgments Act 1982 modelled on the Brussels Convention. This is also confirmed by the crosstabulation between spillover cases and subject-matter which shows that 24 of the 40 spillover cases are private international law- civil and commercial cases.

There have also been 4 competition law cases involving the application of the domestic competition law rules in the Competition Act 1998, which are modelled on the primary EU competition law rules in Articles 101 and 102 TFEU, with a requirement in the legislation to interpret the domestic rules consistently with the EU Courts’ interpretation of Article 101 TFEU.

---

103 Johnston, A ‘Spillovers’ from EU Law into National law: (Un)intended consequences for Private Law Relationships, Ch 16 in Leczykiewicz, D and Weatherill, S eds The involvement of EU Law in Private Law Relationships, 2013: OUP.

104 See Maher, G and Rodger, B, Civil Jurisdiction in the Scottish Courts, 2010: W Green, particularly Ch 2.

105 The crosstabulation between Spillover cases and Rules also shows that 18 of the 40 Spillover cases involved ‘Other’ rules which is in virtually all cases a reference to a Convention, in this case the Brussels Convention. See for example Courtaulds Clothing Brands Ltd. v Knowles1989 S.L.T. (Sh. Ct.) 84; Mackie (t/a 197 Aerial Photography) v Askew 2009 S.L.T. (Sh Ct) 146.
the Treaty provisions. Again Post-Brexit it will be interesting to follow the debate on any proposed reform of the domestic UK competition law rules.

PRIVATE LAW RELATIONSHIPS

This question was really set in order to seek to reflect quantitatively the important work by Leczykiewicz and Weatherill and their focus on the way EU law intervenes in private relationships. That work focused on the extent to which EU law interfered with private autonomy and particularly interesting work by Freedland on the encroachment of EU employment law in national private law relationships. The Table demonstrates that nearly 2/3 of cases (340, 63.7%) concerned private law relationships, and as we have already witnessed, this supports the frequency of EU law cases in certain subjects, notably delict and employment law, and supports the thesis that EU law is producing significant consequences for decision-making in national courts in areas of private law traditionally governed by national law. There is a significant minority of cases not involving private law relationships, many of which are also judicial review petitions, but the important point here is that these statistics demonstrate clearly the impact of EU law not only in relation to State actors and rights exercisable vis-à-vis the State but the extent to which these EU law rights have pervaded the national legal systems and private law context.

PRIVATE AUTONOMY

Leczykiewicz and Weatherill’s focus on the extent to which EU law restricted private autonomy was analysed through 5 phenomena:-

1) Impact of fundamental freedoms on private parties;
2) Scope of application of competition law to private agreements;
3) Impact of EU secondary legislation (most obviously Directives) on private parties;
4) Impact of EU law general principles on private parties; and

---

108 Ibid, Ch 12, Freedland, M ‘The Involvement of EU law in Personal Work Relations: A defining issue for European private Law?’.
5) Liability of individuals to pay compensation for loss caused when they act in Violation of EU law

Accordingly, we decided to code cases based on the extent to which they fell within one of these or an additional ‘Other’ Category. The results are set out in Table 9. What is striking in this context is that 466 or 87.3% of the EU law cases have involved the impact of EU secondary legislation on private parties, in all contexts, either the application of public or private law.

**RULES**

There is inevitably a close relationship between the private autonomy variable and the rules variable where we sought to analyse whether a case involved the consideration and/or application of the following types of EU law rules:- Treaty; Regulation; Directive; Decision Recommendation or soft law; Charter of Fundamental Rights; General principles of EU law; A combination; and Other. The results are set out in Table 10 and Chart 6.

109 Note examples of what constitutes ‘other’.
Unsurprisingly notable is the focus in the case-law on the application of Regulations and Directives in particular, with 61.6% of all cases involving Directives alone. These results mirror the outcomes in relation to the Private Autonomy variable above. There are also a considerable number, 55, of cases involving the application of the Treaty, and the crosstabulation with Subject-matter demonstrates that these are primarily free movement and competition law cases. The ‘Other’ category of rules essentially encompasses Conventions, primarily the Brussels Convention. Crosstabulation with the different Periods shows little in the way of changing trends although crosstabulation with Judicial Review identifies 22 of the 55 Treaty cases (40%) as involving judicial review petitions.

110 The ‘combination’ category frequently involved the combined consideration/application of Treaty and Directive provisions, particularly in employment cases.
SUMMARY AND CONCLUSIONS

This article has presented new and valuable data on the consideration and application of EU law by the Scottish courts since the entry of the UK into the then EEC in 1973. This is the first attempt to provide a comprehensive account of the role played by EU law in the determination of civil disputes in the Scottish legal system, including an overview of the CJEU’s rulings in cases which were referred from the Scottish courts. The analysis of the case-law data is problematic and challenging in relation to some of the variables considered such as success/relevance. The information on the Courts involved arguably tells us little, although perhaps most significant are the limited number of cases considered by the Supreme Court (or the House of Lords at all) and the paucity of CJEU preliminary rulings in Scottish cases. Nonetheless, there is evidence that the EU case-law before the former is increasing and litigants are increasingly more likely to ask the Scottish courts to make a reference to the latter, albeit those attempts have been generally unsuccessful. The most interesting outcomes are as follows: the increasing EU case-law over each period to 2015; the focus of the EU case-law, with two niche public law areas and the three highest areas of EU case-law involving two traditional areas of domestic private law (delict and employment law) and international private law. The relationship between the periods and the EU law subject-matter which is prevalent before the courts is also significant. The prevalence of EU law judicial review petition proceedings is notable as is the pre-eminent position of EU Directives as the source of EU law being applied by the courts in disputes involving EU law. Clearly these broad trends need to be considered in further detail in relation to the specific cases, and also discussed and explored further with subject-matter academic and litigation experts help to understand the context and rationale for some of these trends in the case-law. It is clear that the increase in case-law is potentially explicable to some extent by three related factors: the increasing quantity and subject-matter coverage of EU law; greater awareness of EU law and EU law rights by parties and their legal advisers, and the increasing focus in recent years of the principle of effective judicial protection.111 It is evident that EU law has had a significant and increasing impact on the civil justice system in Scotland, in both private and public law aspects. This is a timely reminder, as we consider the options post-Brexit of the difficulties likely to be faced in any attempt to dismantle and remove EU law from the domestic context. This is indeed exemplified by the discussion on the spillover application of EU law where legislators have chosen to adopt laws applicable only in a domestic context based on an EU law, and with statutory requirements to interpret consistently with the interpretation and application of that EU model by the EU courts. In that context, the data and discussion here allows us for the first time to be aware of,
observe and understand the increasingly significant role in recent years of EU law in the judicial decision-making of the Scottish courts.
